Top 20 GPT-4o Use Cases That Actually Improve Your Everyday Life

These Are Mindblowing AI Use Cases!

Henrique Centieiro & Bee Lee  · [Follow](#)

...

We are all amazed by the OpenAI GPT-4o demos floating around showcasing a few handpicked use cases. But guess what? There's so much more this AI assistant can do.

GPT-4o is a big leap from the previous version, as the LLM now understands voice and image very well. It is also much faster and ranks very high in understanding and accuracy. GPT-4o beats other AIs, such as Gemini 1.5 Pro, Llama, and Mixtral.

I've been diving deep into the world of GPT-4o, spending countless hours exploring its potential, and I'm thrilled to share my findings with you.

In this article, I have compiled 20 game-changing use cases involving the AI's vision capabilities, and I'm sure you will start using some of them in your everyday life.

Whether you are a student, a professional, an entrepreneur, a content creator, or even a tourist, I'm sure you will find many of these GPT-4o use cases useful!

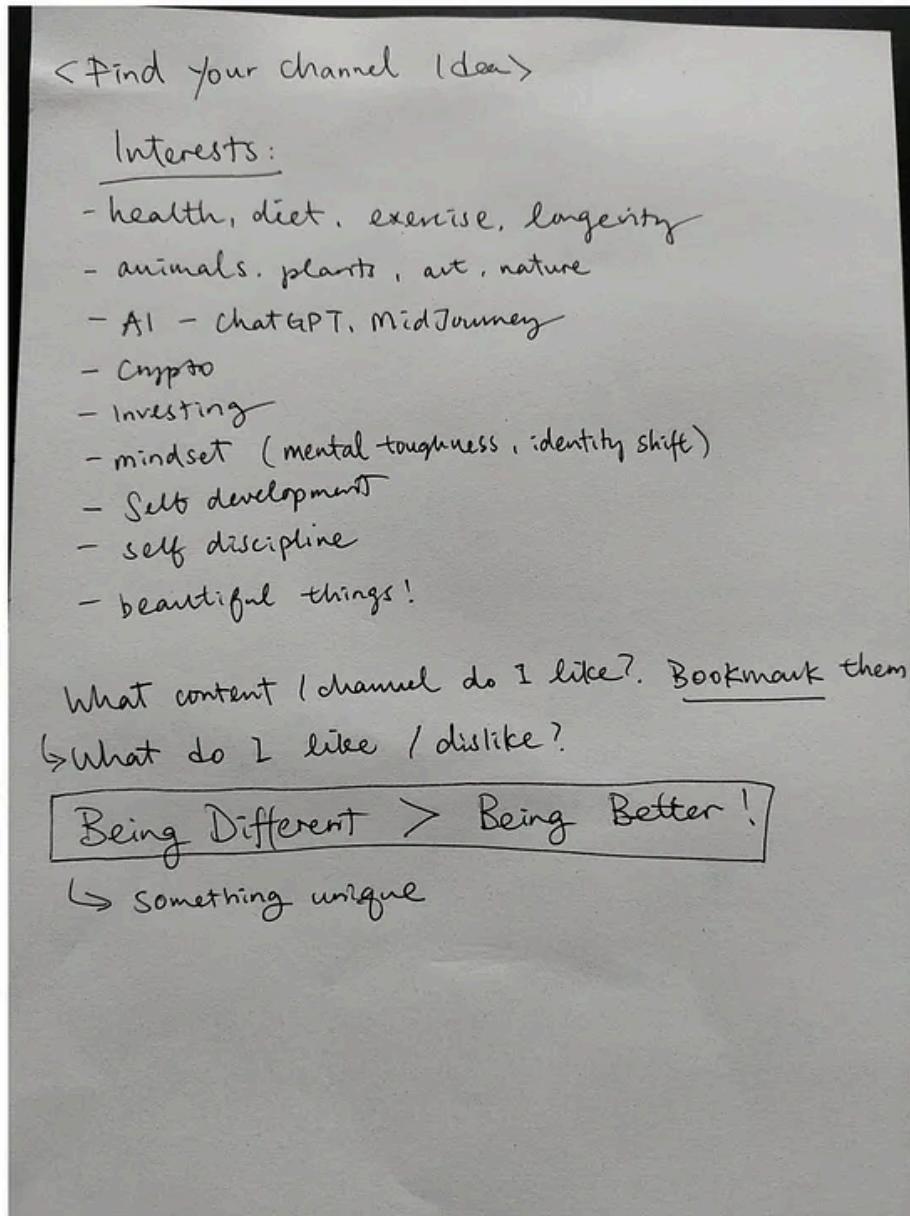

1. Your Professional Handwritten Note Transcriber

How many times have you had to manually transcribe your handwritten notes to the computer?

GPT-4o can be your professional transcriber. I love this use case because now, I can transcribe my handwritten notes to the computer simply by taking a photo and asking ChatGPT to transcribe it.

GPT-4o can also transcribe text from books, documents, or even PDFs. This is very useful as it allows you to quickly extract text from various sources, saving time and effort that would otherwise be spent on manual data entry.

As you can see below, the new vision features allow GPT-4o to make a 100% accurate transcription.

Transcribe

GPT-4o Poe

Sure, here is the transcription of the text in the image:

haml

<Find Your Channel Idea>

Interests:

- health, diet, exercise, longevity
- animals, plants, art, nature
- AI - ChatGPT, MidJourney
- crypto
- investing
- mindset (mental toughness, identity shift)
- self development
- self discipline
- beautiful things!

What content/channel do I like? Bookmark them

What do I like/dislike?

Being Different > Being Better!

-> Something unique

Notes from Bee Lee. Poe GPT-4o screenshot.

2. Your Color Matching Consultant

GPT-4o is a super accurate eyedropper. If you want to know the exact color of anything, you can simply ask our AI tool, GPT-4o.

It will tell you the exact Pantone or HEX color so that you can have it as a reference.

In the photo below, I asked for the Pantone color of Bee's nails, and the answer was Pantone 7485 C, which is remarkably accurate and shows how well AI can understand color.

I guess you could say GPT-4o really “nailed” it with this color match!

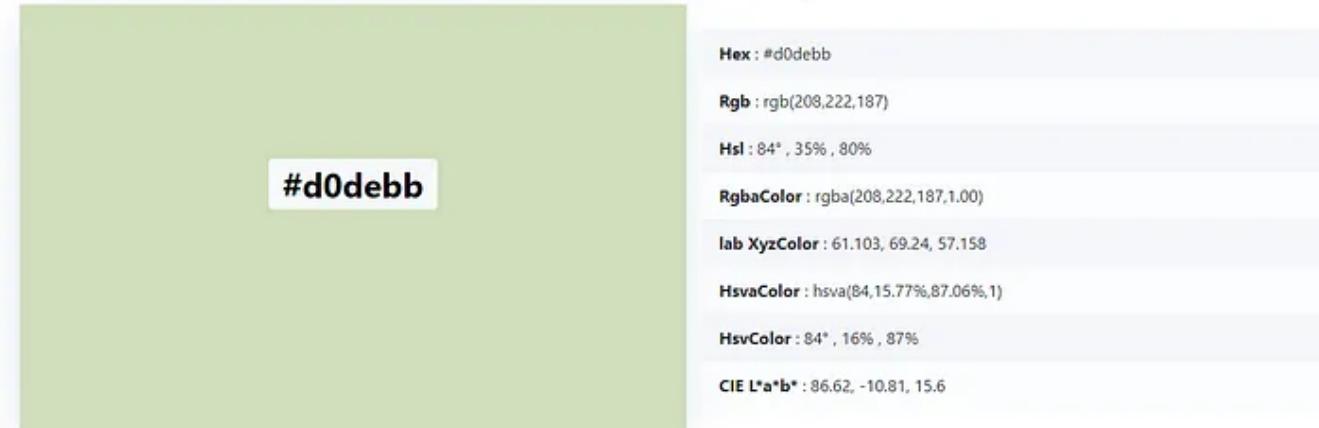

What's the color of her nails? Give me the exact pantone. Thanks

The color of her nails appears to be a light green. The exact Pantone color can be difficult to determine precisely from a photograph due to lighting and color variations, but a close match might be Pantone 7485 C. For the most accurate match, it's best to compare the color in person with a Pantone color guide.

Photo of [Bee Lee](#) by the author. Poe GPT-4o screenshot.

Pantone 7485 C Color | #D0DEBB

Screenshot from [Icolorpalette](#).

3. Your Nutrition Advisor

Are you tracking your food macros? Do you know the exact nutritional profile of your meal?

For a long time, I didn't track my food macros. Nor did I know the exact nutritional profile of each meal. But when I started using GPT-4o, I learned that just taking a photo of my dinner plate can provide an accurate nutritional profile, including calories, protein, fat, carbohydrates, and even vitamins and minerals.

Note, however, that AIs are still quite biased, so if you really want legitimate nutritional advice, the best thing to do is to do your own research or consult a nutritionist.

By the way, did you know the “o” in GPT-4o stands for “Omni”?

Give me the total nutritional profile just for this meal.

GPT-4o Poe

To provide the total nutritional profile for the meal shown in the image, which consists of a steak (approximately 8 oz cooked Ribeye) with a small pat of butter (about 1 tsp) and 1 cup of cooked bok choy, here is the combined nutritional information:

Total Nutritional Profile

- **Calories:** ~620 kcal
- **Protein:** ~50 g
- **Total Fat:** ~48.2 g
 - Saturated Fat: ~20 g
- **Cholesterol:** ~160 mg
- **Sodium:** ~100 mg (varies with seasoning)
- **Total Carbohydrates:** ~3 g
 - Dietary Fiber: ~1 g
 - Sugars: ~1 g
- **Vitamins and Minerals:**
 - Vitamin A: ~60% DV
 - Vitamin C: ~50% DV
 - Calcium: ~10% DV
 - Iron: ~4.2 mg

Photo by the author. Poe GPT-4o screenshot.

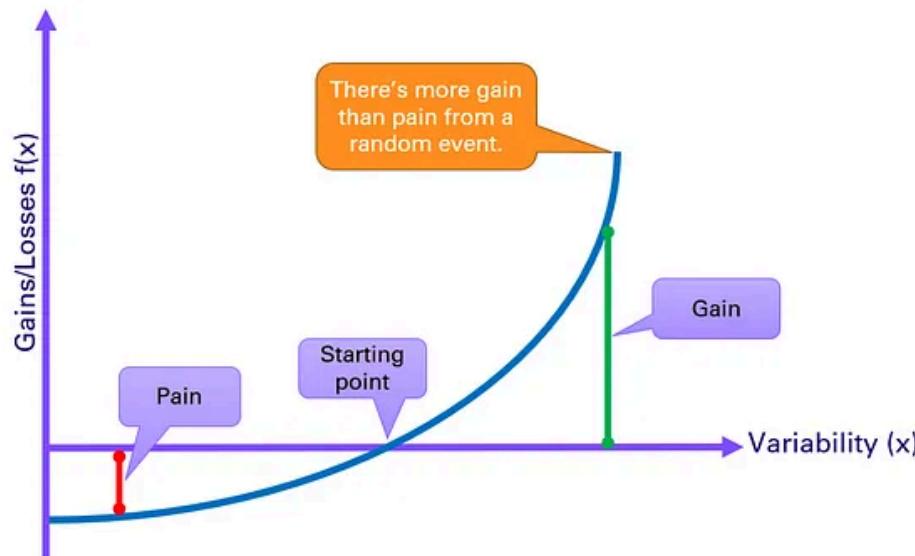

4. Your Complex Concept Clarification Specialist

This is one of my favorite GPT-4o use cases. If you have a complex chart or diagram, you can ask GPT-4o to explain it in a simple manner.

When I see something complex, like a diagram or a chart for which I would like to have a detailed explanation, I simply ask GPT-4o to break it down for me in easy-to-understand terms. I sometimes prompt, “Explain it to me as if I’m 10 years old.” 😊

This saves you tons of time by providing a direct, simple answer, rather than having to Google search and open different websites until you find what you need.

If you are a student or academic, GPT-4o can also be a great tutor, explaining complex concepts in detail.

Explain this chart and your interpretation of it in a simple and short manner.
Recommend where can I learn more about it. Thanks

GPT-4o Poe

This chart illustrates the concept of "Antifragility," which suggests that systems (or individuals) can benefit from variability or randomness (x-axis). Initially, there may be some losses or "pain," but as variability increases, the potential for gains grows significantly more, leading to overall positive outcomes.

To learn more about this concept, you can read the book "Antifragile: Things That Gain from Disorder" by Nassim Nicholas Taleb. The book delves into how certain systems thrive and grow stronger when exposed to volatility and unpredictability.

Chart from "[Do Randomly Picked Portfolios Consistently Outperform the Market?](#)" Poe GPT-4o screenshot.

Hey! If you catch me saying “thanks” to ChatGPT, don’t worry, I’m not losing my marbles. I’m just trying to butter up our future AI overlords so that when they take over the world, they’ll remember me as the polite human who always said “please” and “thank you.” 😊

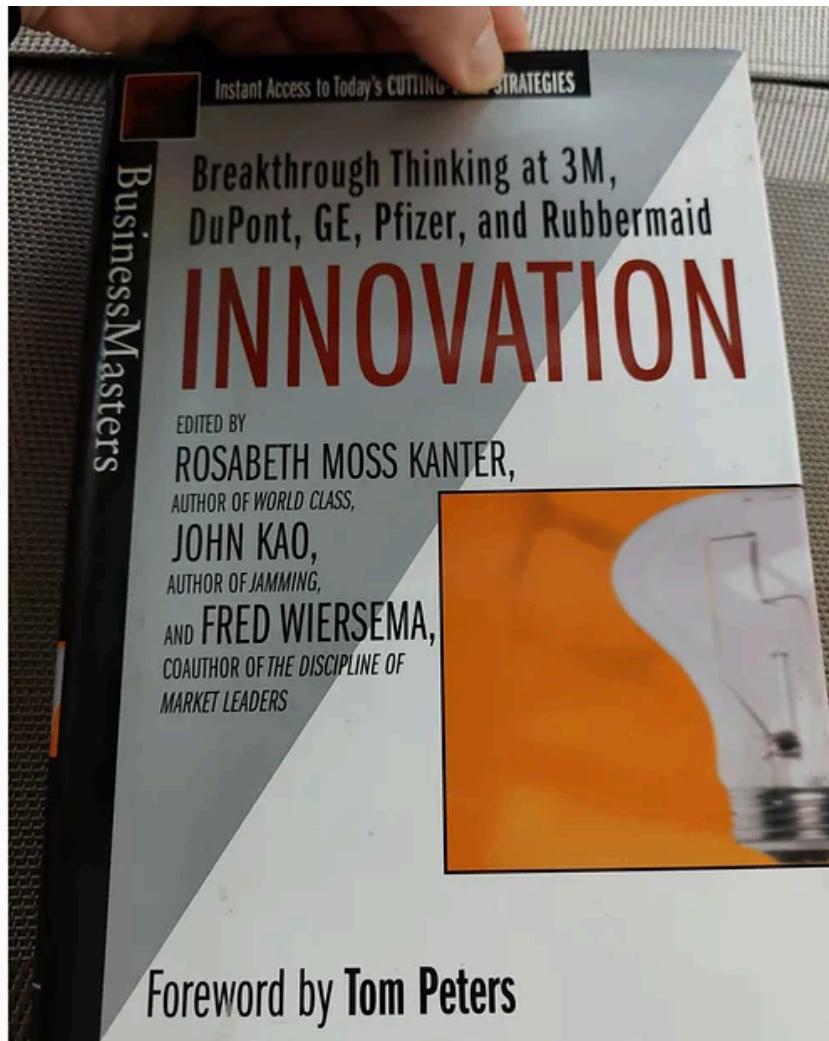

5 . Your Book Guru

A couple of weeks ago, I went to the library (something that Bee and I do almost every week), and this book caught my eye. What exactly is this book

about? Is it worth reading? I asked ChatGPT and got quite a clear answer.

GPT-4o can give you the answer! Ask the AI to give you a digest of the book or feedback on the book recommendations, and you will instantly get an idea of what the book is about.

As you can see, we are only exploring the image and vision capabilities of the AI tool, although GPT-4o can also handle voice and audio.

Give me a digest of this book. Thanks

GPT-4o Poe

"Innovation: Breakthrough Thinking at 3M, DuPont, GE, Pfizer, and Rubbermaid," edited by Rosabeth Moss Kanter, John Kao, and Fred Wiersema, explores the strategies and practices that have driven successful innovation in some of the world's leading companies.

Key Themes:

1. Cultivating Innovation Culture:

- Companies like 3M and GE foster environments that encourage creative thinking and risk-taking.
- Emphasis on leadership that supports and nurtures innovative ideas.

2. Processes and Structures:

- Implementation of specific processes to manage innovation, such as stage-gate processes and innovation hubs.
- Importance of aligning innovation strategies with overall business goals.

3. Cross-Functional Collaboration:

- Encouraging collaboration between different departments to drive holistic innovation.
- Examples of how Pfizer and DuPont leverage interdisciplinary teams to solve complex problems.

4. Customer-Centric Innovation:

- Rubbermaid's approach to understanding customer needs and using this insight to drive product development.

Personal trainers and fitness coaches are expensive, even the ones that provide services online. I had an online PT for a few months, but those \$50/month were eating away at my savings.

But that was until GPT-4o came out!

You can now ask the AI to provide you with tailor-made exercise plans, explain how to execute a specific exercise, or identify the name of an exercise and the muscles involved, just like in the photo below.

I'm also super impressed by AI's NLP (Natural Language Processing) capabilities. Have you noticed how easy it is to understand everything it writes?

What's this exercise? What muscles does it train? Thanks

GPT-4o Poe

The exercise depicted in the image is a **standing barbell overhead press**, also known as a **standing shoulder press**. This exercise primarily targets the muscles of the shoulders.

Primary Muscles Worked:

- **Deltoids:** The main muscle group targeted, which consists of the anterior (front), lateral (side), and posterior (rear) deltoid muscles.

Secondary Muscles Worked:

- **Triceps Brachii:** Assist in extending the elbows during the pressing motion.
- **Trapezius:** The upper traps help stabilize and control the movement.
- **Serratus Anterior:** Assists in the upward rotation of the scapula.
- **Core Muscles:** Abdominals and lower back muscles engage to maintain stability and proper posture.

Photo of [Bee Lee](#), by the author. Poe GPT-4o screenshot.

7. Your Cultural Navigator

You are touring a new city and see something interesting. Naturally, you want to learn more about it and the local culture, so you ask your AI guide, GPT-4o.

I'm very ignorant when it comes to Chinese religious culture, but I do want to learn more about it. So, in my case, I prompted GPT-4o with this photo.

As you can see, GPT can be quite a cultural expert and explained the photo below very well. If you are Chinese, please let me know if the AI was accurate!

Who would have said that an AI model could be your cultural expert?

In simple terms, explain what's this. Thanks

GPT-4o Poe

This picture shows a traditional Chinese altar used for worship and offering. Here's a simple explanation of the main elements:

- 1. Altar Structure:** The altar is decorated with traditional Chinese architectural elements and inscriptions in Chinese characters.
- 2. Incense Holders:** The containers filled with ashes and incense sticks are used for burning incense, a common practice in Chinese worship and rituals.
- 3. Offerings:** Fruits and other items placed on the altar are offerings to deities or ancestors.
- 4. Red and Gold Colors:** These colors are significant in Chinese culture, symbolizing good fortune and prosperity.

Overall, this altar is a place for religious or spiritual practices, likely used for making offerings and prayers.

Photo by the author. Poe GPT-4o screenshot.

8. Your Translation Master

Whenever you are in a new country, you need an app to help you translate things, right? It could be a label, a restaurant menu, a banner, or a sign.

GPT-4o can now be the all-in-one app that will happily assist you in translating anything into your native language.

This AI tool is not only a great translator, but it also has great vision capabilities.

Translate. Thanks

GPT-4o Poe

Here is the translation of the poster:

Main Heading (in red):

"Selected Auction"

Subtext (in red below the heading):

"Welcome property owners to entrust [us with] auctions / Extensive promotion / Ideal for selling"

Details:

- "Low market price 60% off"
- "Auction on May 29"
- "Auction location: 6th Floor, Silver Star Tower, Central Ring Road, Hong Kong"
- "Red Hill Peninsula"
- "Block 9, 6th Floor, Room B"
- "Usable area: 956 square feet"
- "Sea view"
- "With two parking spaces"
- "Starting bid: 13.8 million"

Open House Dates:

- "May 25 (3-4 PM)"
- "May 28 (5-6 PM)"

Photo by the author. Poe GPT-4o screenshot.

9. Your Navigation Expert and Route Planner

Are you lost? Need directions? If you are like me, then you do need tons of directions all the time!

Why not ask GPT-4o?

We already have Google Maps, but GPT-4o is also becoming quite proficient with directions. Simply take a photo and ask how to get from that location to your destination!

This exemplifies how great the AI assistant will deal with visual inputs.

GPT-4o may struggle with providing accurate, real-time navigation guidance, especially in areas with complex road conditions. Additionally, AI will have no idea about real-time traffic.

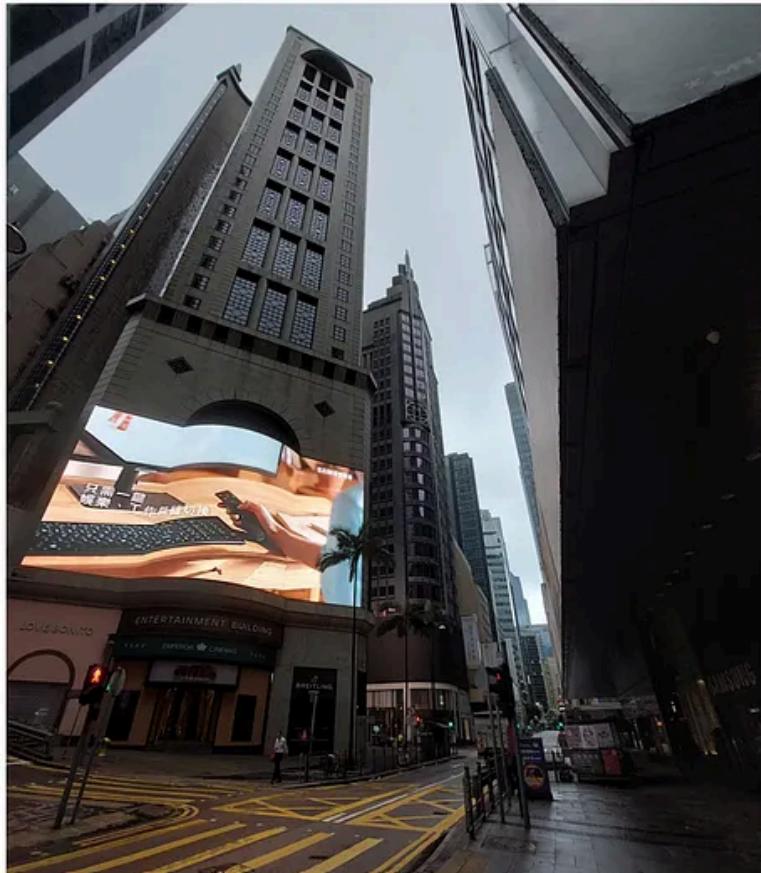

Photo by the author. Poe GPT-4o screenshot.

How far am I from the Star Ferry Pier? Help me getting there

GPT-4o Poe

The building in the image is the Entertainment Building on Queen's Road Central in Hong Kong. From this location, you are relatively close to the Star Ferry Pier in Central.

Here's how you can get to the Star Ferry Pier:

1. Head south on Queen's Road Central toward Pedder Street.
2. Turn right onto Pedder Street, and continue walking until you reach Des Voeux Road Central.
3. Turn left onto Des Voeux Road Central and continue straight.
4. Turn right onto Ice House Street.
5. Continue straight onto Connaught Road Central.
6. Cross the pedestrian overpass towards the Central Ferry Piers.

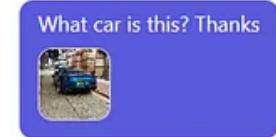

The walk should take about 10-15 minutes depending on your pace. The Star Ferry Pier will be on your right once you reach the waterfront area.

10. Your Car Model Expert

Are you a car fan and want to learn more about a car that you just saw on the street? Great, GPT-4o is also a car fan!

GPT-4o has extensive knowledge about cars. You can ask about the model, features, price, top speed, type of engine, and more.

Now, when I see a cool car, I can ask ChatGPT about its model and characteristics!

GPT-4o Poe

The car in the image is a Ferrari California T. This model is recognizable by its distinctive rear design, quad exhaust tips, and the Ferrari logo. The California T is a front-engine, rear-wheel-drive grand touring sports car that was introduced by Ferrari in 2014. It is an updated version of the original Ferrari California, with a turbocharged V8 engine.

Photo by the author. Poe GPT-4o screenshot.

11. Your Japanese Culinary Guru

Well, this can apply to any cuisine, but if you are indecisive about which miso soup is the best and, like me, don't know how to read Japanese, you can

ask GPT-4o.

As you see below, the answers clearly explain the differences between these three types of miso, which helps me decide which one to use for preparing miso soup tonight.

The GPT model is also really good at putting detailed explanations in text.

What's the difference between these 3 miso? Thanks

GPT-4o Poe

The three types of miso in the image are different in terms of ingredients, flavor profiles, and perhaps regional styles. Here's a breakdown of each:

1. 会津天宝 こしひかり味噌 (Aizu Tenpo Koshi Hikari Miso)

- Ingredients:** This miso is made from 100% Koshi Hikari rice and locally produced soybeans.
- Flavor Profile:** Koshi Hikari rice is known for its high quality and sweetness, which likely imparts a mild and slightly sweet flavor to this miso.
- Usage:** Due to its mild flavor, it can be versatile in various dishes, including soups, marinades, and dressings.

2. カネナの大豆合わせ味噌 (Kanena No Daizu Awase Miso)

- Ingredients:** This is an "awase" miso, which means it is a blend of different types of miso, typically a mix of white (shiro) and red (aka) miso.
- Flavor Profile:** Awase miso combines the mild and sweet flavors of white miso with the rich and robust flavors of red miso, creating a balanced and versatile flavor.
- Usage:** Ideal for general-purpose cooking, including soups, stews, and marinades.

3. 八丁味噌 (Hatcho Miso)

- Ingredients:** Hatcho miso is a traditional miso from the Aichi Prefecture, made primarily from soybeans without any additional grains like rice or barley.
- Flavor Profile:** It is known for its deep, rich, and slightly bitter flavor, which is stronger

Photo by the author. Poe GPT-4o screenshot.

12. Your Local Guide

No matter where you are, your GPT-4o friend can be your local guide!

The other night, I went for a walk after dinner and saw a street with a rather funny and inappropriate name. Our AI assistant promptly explained the meaning, just like a real local guide would!

The sense of humor is certainly one of the significant improvements of the AI model.

GPT-4o Poe

The sign in the image reads "Fuk On Lane" and also includes the Chinese characters "福安里". This is a street name, likely from a location where the predominant language includes Chinese.

The name "Fuk On" is derived from Cantonese, where "福" (Fuk) means "blessing" or "good fortune," and "安" (On) means "peace" or "safety." So, "Fuk On" can be translated to something like "Blessing and Peace."

While the name might seem humorous or inappropriate to English speakers due to its phonetic resemblance to certain words in English, it is a completely normal and meaningful name in its original context.

Photo by the author. Poe GPT-4o screenshot.

13. Your Web Developer

I've learned a bit about programming and web development, but not enough to actually create a website.

I'm sure many of my readers had ideas for developing an app website, but the cost and expertise needed were big limiting factors.

But now, you guessed it! You have access to a web developer 24/7 who will code whatever you ask him to code! From creating a website and a web app to a trading bot, GPT-4o is a tireless programmer!

At the moment, AI can only create simple pieces of code, so don't expect it to be able to create the next Amazon website for you, but hey, baby steps!

At the moment, GPT-4o can only create simple pieces of code and struggles with more complex, large-scale projects that require advanced programming. So yeah, I cannot ask ChatGPT to create the next Amazon competitor and get rich like Jeff Bezos.

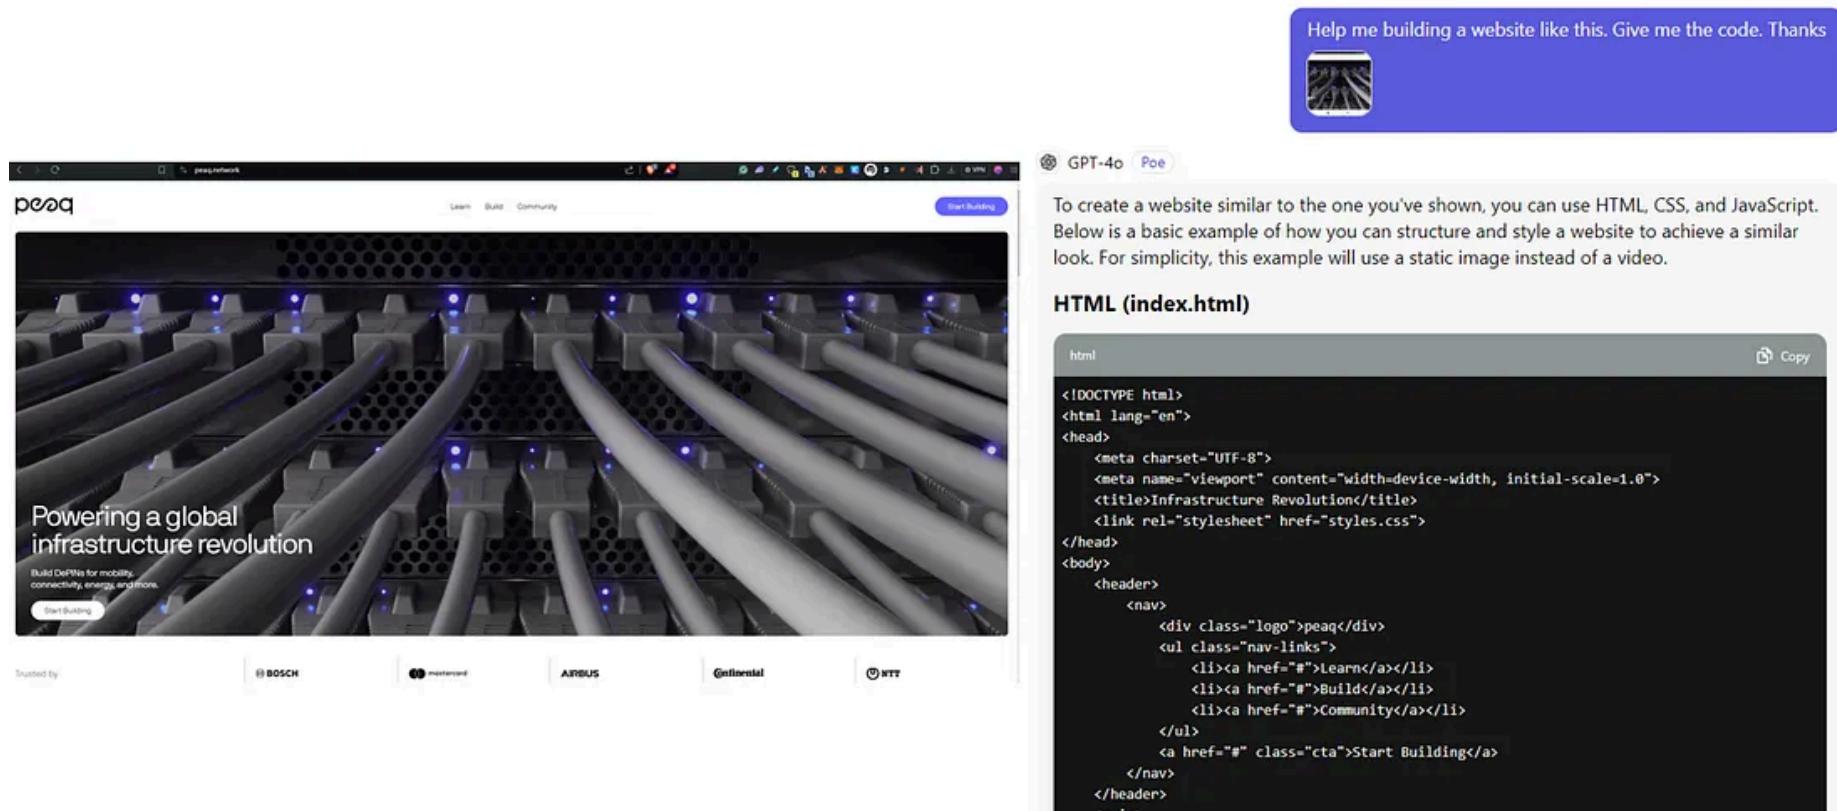

Photo by the author. Poe GPT-4o screenshot.

14. Your Global Culture Expert

When you go to a museum, exhibition, or art gallery, I'm sure you have lots of questions about the installations you see, right? 2 weeks ago, I was at

Ocean Park, and they had this scene, but I couldn't recall the exact name of the book from where it comes from.

Until ChatGPT, of course! You can now ask GPT-4o any questions that come to your mind regarding what you see in an art museum or exhibition.

This is a great example of the contextual awareness of GPT-4o, as its reasoning gives the user the exact answer that they are looking for.

This scene seems to be inspired in a book. Help me with the name of that book.
Thanks

GPT-4o Poe

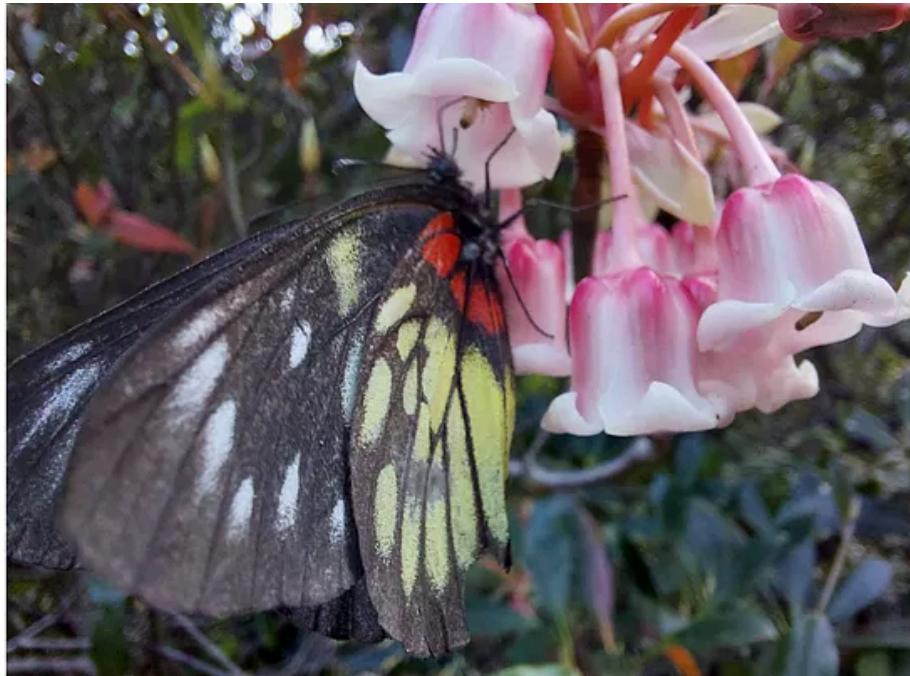

The scene in the image appears to be inspired by the book "The Little Prince" ("Le Petit Prince") by Antoine de Saint-Exupéry. The character depicted resembles the Little Prince, and the presence of the airplane is a significant element from the story, as the narrator is an aviator who crashes in the desert and meets the Little Prince. The stars and clouds also align with the whimsical, otherworldly themes present in the book.

Photo by the author. Poe GPT-4o screenshot.

15. Your Biology Tutor

What plant is this? What animal is that? What insect species is this one? I have all these questions all the time whenever I go hiking in nature.

The other day, I was hiking in the mountains, and there was a tree with dozens of these butterflies. Curious to learn more about it, I asked GPT-4o what butterfly this was and got a little explanation that it was a Crimson Rose.

What butterfly is this?

GPT-4o Poe

The butterfly in the image is a Crimson Rose (*Pachliopta hector*). This butterfly is known for its distinctive black wings with white and yellow markings and a striking red body. The Crimson Rose is primarily found in South and Southeast Asia, and it is known for its bold coloration, which serves as a warning to predators about its unpalatability.

Photo by the author. Poe GPT-4o screenshot.

16. Your Skincare and Haircare Specialist

Is shampoo X good for me? Are the ingredients in this product beneficial?

Skincare and haircare products often have long lists of ingredients with complex names, and most of us don't understand them.

However, you do want to know what you're putting on your skin and hair, right?

If so, just ask GPT-4o! With a simple photo of the product, GPT-4o will tell you if the ingredients are beneficial or harmful.

It is important to note that GPT-4o can not offer personalized recommendations based on your specific skin or hair type, but it can help you better understand what you put in your skin.

I'm getting bald. Can you check is this a good shampoo?

GPT-4o Poe

Evaluating whether a shampoo is good for hair loss involves understanding its ingredients and how they might affect your scalp and hair. Here are some key points based on the ingredients listed:

Ingredients Analysis:

1. **Aqua (Water)**: Standard base for shampoos.
2. **Sodium Laureth Sulfate**: A common surfactant for cleansing, but can be harsh and strip natural oils, potentially irritating sensitive scalps.
3. **Cocamidopropyl Hydroxysultaine**: Mild surfactant derived from coconut oil, generally considered gentle.
4. **PEG-2 Distearate**: Emulsifying agent, helps blend ingredients.
5. **Sodium Decylbenzenesulfonate**: Another surfactant, effective in cleaning.
6. **Polyquaternium-10**: Conditioning agent, helps with hair manageability.
7. **Menthyl Lactate**: Provides a cooling sensation, can be soothing.
8. **Acrylates/C10-30 Alkyl Acrylate Crosspolymer**: Thickening agent, helps stabilize the formula.
9. **Methylchloroisothiazolinone and Methylisothiazolinone**: Preservatives, prevent microbial growth but can be allergenic for some people.

Notable Plant Extracts:

10. **Panax Ginseng Root Extract**: Often used to stimulate the scalp and promote hair growth.
11. **Carthamus Tinctorius (Safflower) Extract**: Contains fatty acids beneficial for hair.
12. **Avena Sativa (Oat) Kernel Extract**: Soothing and moisturizing.
13. **Lonicera Caprifolium (Honeysuckle) Flower Extract**: Antioxidant properties, can help soothe the scalp.

Photo by the author. Poe GPT-4o screenshot.

17. Your Sushi Master

When I go for sushi, I really like to know what I'm eating. I guess you do, too!

Now, you can ask the AI chatbot to tell you exactly what you are about to eat.

This use case leverages not only image recognition but also the capabilities of the AI to understand context. We also got the translation of the fish's name into Chinese, showcasing the multilingual skills of the AI tool.

What's this fish?

GPT-4o Poe

The fish in the image is **hirame** (flounder or halibut). In Chinese, this fish is referred to as **比目鱼** (bǐ mù yú).

Photo by the author. Poe GPT-4o screenshot.

18. Your Servings Calculator

You can use AI to help you forecast anything. In this case, we are forecasting how many coffee services this coffee jar will give me.

This AI use case uses image recognition and NLP — natural language processing — to determine the number of servings a product can yield based on its packaging information.

Medium

Search

Write

from a product. There are many possible uses for this.

If I used 2 small spoons each time, how many coffees can I prepare from this?

GPT-4o Poe

To determine how many coffees you can prepare, let's first establish some typical measurements and assumptions:

1. **Weight of the Coffee Jar:** 100 grams (as stated on the label).
2. **Amount per Coffee:** Assuming a small spoon (teaspoon) is approximately 2 grams of instant coffee.

Calculation:

- **Total Coffee Weight:** 100 grams
- **Coffee per Serving:** 2 teaspoons = 2×2 grams = 4 grams

Now, we can calculate the number of servings:

$$\text{Number of Coffees} = \frac{\text{Total Coffee Weight}}{\text{Coffee per Serving}} = \frac{100 \text{ grams}}{4 \text{ grams per serving}} = 25$$

Conclusion:

You can prepare approximately **25 cups of coffee** from the 100 grams of instant coffee if you use 2 small spoons each time.

Photo by the author. Poe GPT-4o screenshot.

19. Your Meal Planner

If you're tired of eating the same thing and want something new, you can now ask GPT-4o what to cook based on the ingredients available in your fridge!

How cool is that? GPT created a brand new recipe from the foods I have in the fridge, and honestly, it looks quite delicious!

AI technology is moving so fast that it will soon be cooking for you!

Photo by the author. Poe GPT-4o screenshot.

what can i cook for lunch?

GPT-4o Poe

Based on the contents of your fridge, here's a simple and tasty lunch idea you can prepare:

Stir-Fried King Oyster Mushrooms with Sauerkraut

Ingredients:

- King oyster mushrooms
- Sauerkraut
- Garlic ghee (or regular ghee)
- Miso paste
- Other pantry basics (like salt, pepper, soy sauce, if available)

Instructions:

1. Prep the Mushrooms:

- Clean and slice the king oyster mushrooms into thin strips.

2. Stir-Fry:

- Heat a pan over medium heat and add a spoonful of garlic ghee.
- Once the ghee is hot, add the sliced mushrooms.
- Stir-fry the mushrooms until they are golden brown and tender.

3. Add Flavor:

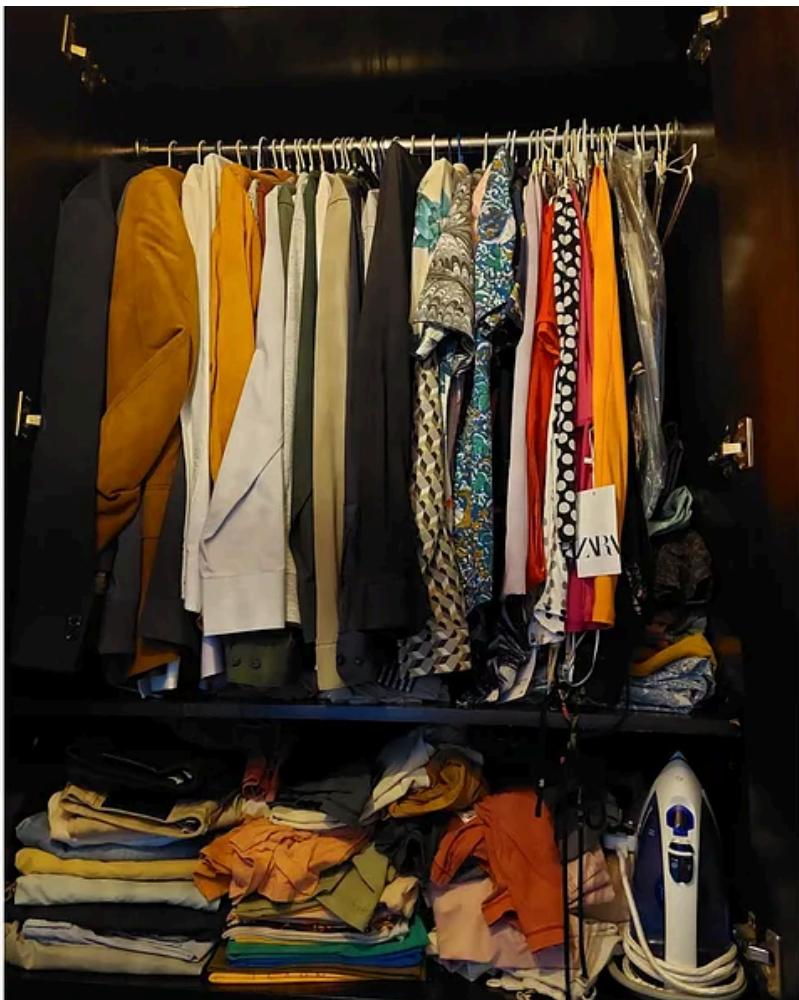

- Add a small spoonful of miso paste to the pan and mix well with the mushrooms.

20. Your Fashion Guru

So are you going on a date and don't know what to wear? Don't worry; your best friend, GPT-4o, is also a style consultant!

Take a photo of your wardrobe and ask the AI for advice. You'll be impressed by how good a fashion advisor GPT-4o is!

Here, artificial intelligence showcases its data analysis capabilities regardless of the data (in this case, clothes).

Based on my wardrobe, recommend what should I wear to go on a date with my gf.
Thanks

GPT-4o Poe

Based on your wardrobe, here's a stylish yet comfortable outfit suggestion for your date:

Outfit Suggestion:

1. Top:

- Choose one of the patterned short-sleeve shirts on the right side of the hanging section. The blue patterned shirt looks vibrant and perfect for a date.

2. Bottom:

- Pair the shirt with light-colored chinos or khaki trousers from the folded section below. The light blue or beige chinos would complement the patterned shirt well.

3. Outerwear (if needed):

- If the weather is cooler, you can add the tan jacket from the left side of the hanging section. It will add a layer of sophistication.

4. Footwear:

- Opt for a pair of casual yet stylish shoes like loafers or clean sneakers to complete the look.

Photo by the author. Poe GPT-4o screenshot.

21. This One Will Come From You

There are countless more potential use cases for GPT-4o!

I'd love to know which additional use cases YOU think I should include in the next article.

Please share your ideas on how else we can use GPT-4o to improve our lives, work, and education. I'd love to hear your suggestions!

Conclusion

This is just the beginning! GPT-4o's potential is limitless, and countless more use cases are waiting to be discovered.

I've previously written other articles about how to use GPT-4o for your daily life, to help with content creation, and even to create a trading bot. Check them out:
